

How to count to 31 on one hand

Put your left hand in front of you, all fingers raised.

You could count each finger as one and add each finger for a total of 5.

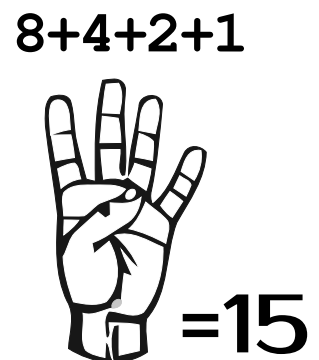

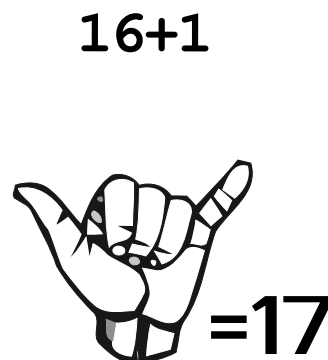

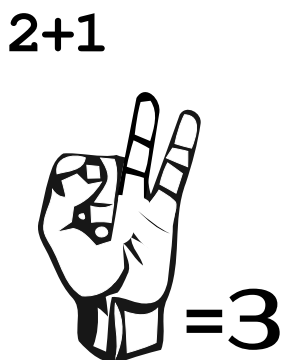

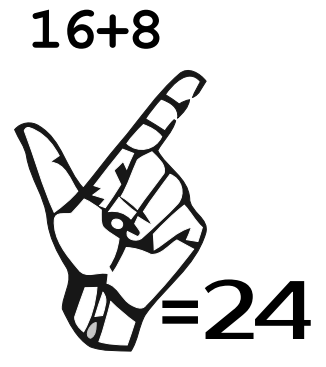

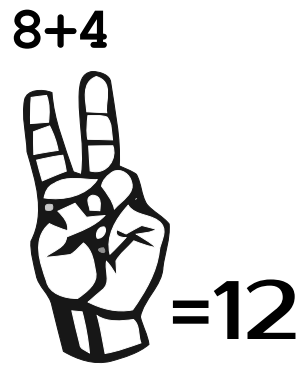

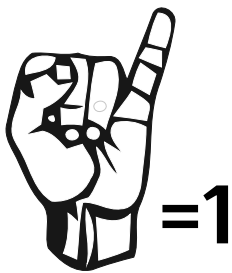

There is a better way!

1 Start at 1 on your little finger and then double for the next finger, continue to double until you reach 16 on your thumb.

Count by adding up whichever fingers are raised.

Examples

Using this counting system, can you count all the way to 31?
Congratulations! You've learned Binary!
